tatii.oxo@gmail.com
tatiana.inama.dev

Hey! I'm an Argentinian javascript developer living in The Netherlands with ~4 years of experience.
I have a knack for functional programming and strong typing. I have experience working with frameworks like React and Angular.
I'm passionate about UX/UI design, you could say my skills hit the sweet spot between design and development.
Besides programming, I love spending my time cooking, taking care of my indoor jungle and walking my wire fox terrier Taco.

Freelance Developer

New website for ESPECIFICOS Buenos Aires
Graphic Designer / UX-UI Designer / Frontend Javascript Developer
June 2020 - Present
github.com/tatianainama/eba-next

ESPECIFICOS Buenos Aires (EBA) is a skin care company from Argentina.

I'm currently working on designing and implementing a new website, keeping in close contact with client for frequent feedback. The design is at a fundamental level, we are re-thinking the company's image and the website is built around that.

The project includes a custom-made CMS to keep all their data up to date.

Voices of Merseyside
March 2020 - June 2020
github.com/tatianainama/voices-of-merseyside

Voices of Merseyside is a project for graduate thesis research that explores the accents, dialects and indentities of people of the Merseyside region.

The project consisted of two applications: a multiplatform survey and an admin panel for the researcher to analyze and read the results.

The multiplatform survey consisted of a couple of questions followed up of a drawing tool to create shapes around the different areas of Merseyside and assign requested data about those places.

The admin panel performed statistical analysis on the data and allowed the user to export results in a friendly format, along with visualizing multiple properties on heatmaps for more intuitive analysis of the data.

Full Time Positions

Jampp
Frontend developer
August 2017 - January 2018

Jampp is a demand-side platform that combines behavioral data with predictive and programmatic technology to help advertisers acquire and engage mobile app customers. Most of my responsabilities were:

- Create a new Dashboard in NodeJS and React
- Create wireframes, prototypes and flows to effectively communicate interactions and design ideas
- Develop features using Javascript, HTML5 and CSS3
- Work alogside with core, data science and product teams
- Active participation in product definition (design thinking)

React Redux NodeJS HTML5 CSS3 SASS Sentry

Musimundo - NEC @Hexacta
Fullstack developer
June 2017 - August 2017

Musimundo is one of the biggest retail chains of Argentina. We were asked to redefine the user/client experience in the sales process

To achieve this, we first defined a discovery stage, where we worked in two fronts:

- UX/CX Analysis: We analyzed the current process and we defined the different customer and user archetypes, the current POS and requirements
- Technical Side: We defined the new architecture based on their headquarters and branches infrastructures

We designed a mobile application for the personnel using Angular 2

Angular 2 Typescript HTML5 CSS3 SASS

Lectoramas @Hexacta
Fullstack javascript developer
April 2017 - June 2017

The project involved a multi-platform app to read and listen to non-fiction book summaries. The platform consisted of a back-office web app and a mobile end-user app

React-Native React HTML5 CSS3 NodeJS MongoDB

Prescient Traveler @Hexacta
Fullstack javascript developer
March 2015 - April 2017

Prescient Traveler is a platform for monitoring and assisting people who are traveling around the world

The platform consist of a mobile application, a web monitoring and a backoffice application

The mobile application were used by the travelers to inform themselves about the area. They also received alerts and notifications of currents affairs of the zone

The web monitoring was used in the control center. It mainly consisted of a wordwide map that displayed travelers movement arround the globe and potential dangerous/risk zones around them.

Finally, the backoffice application was used to generate contento for the mobile application about customs and data about their itinerary destinations

AngularJS Mapbox NodeJS MongoDB HTML5 CSS3

Hexacta Architecture Team (HAT) @Hexacta
Intern
June 2014 - March 2015

The HAT main objective is to provide advice and solutions to Hexacta's technical project-managers on issues of architectural and design decisions, technologies and frameworks to use, imrpoving product quality and productivity

AngularJS NodeJS Java MongoDB SQL

ESPECIFICOS Buenos Aires
Graphic Designer / UX-UI Designer / Fullstack Javascript Developer
June 2014 - December 2017

ESPECIFICOS Buenos Aires is a professional skin care brand from Buenos Aires.

My main job was to create a visual identity and communicate ideas that inspire, inform and captivate customers

Most of my responsabilities as a designer were to create and update packaging templates and mock-ups, create emails/templates for newsletters and general company communication, design and implement creative graphics for marketing and advertisement and create/maintain the official webpage

As a developer, we also developed an educational platform that streamed online courses to latin american students

The online platform allowed the students to read course material, take surveys and exams and interact with their teachers as well

AngularJS NodeJS MongoDB Adobe Illustrator Adobe Photoshop Adobe inDesign

Personal Projects

Critter Crossing
March 2020
github.com/tatianainama/critter-crossing

Critter crossing is a personal application that helps Animal Crossing players to complete the critterpedia inside the game

React NodeJS

Kitchen
2019 - In progress
github.com/tatianainama/kitchen

Kitchen is my personal online recipe box. I was tired of having all my favourite recipes all over the place, so I created a multi platform tool to organize them

The app scrapes recipes from my favourite online pages and categorize and normalize the data for me (no more imperial unit system!)

It also helps me organize my weekly shopping list based on a food calendar. In the future I would like to sync the shopping list to my Supermarket's online shopping cart

React Redux Typescript NodeJS MongoDB

Education

Computer engineering
2012 - 2016
Universidad Nacional de la Matanza
